

Evolution in Internal Pipe Blasters

PanBlast™ Tornado Internal Pipe Blasting Tool

The revolutionary PanBlast™ Tornado Internal Pipe Blasting Tool changes all previous perceptions that internal pipe blasting tools are tedious and need to be constantly monitored and re-adjusted during operation.

Features & Benefits:

- A customized thermoplastic sleeve and bleed air-venting configuration provide long tool service life and superior rotary joint sealing.
- A rear spring adjusted sealing arrangement offers positive sealing pressure and eliminates the need for tool adjustment during operation and frequent seal replacement.
- The use of a customized venturi injector in conjunction with a case hardened spindle tube arrangement for abrasive delivery provides reliable and efficient non-stop tool operation.
- A twin shoe braking system provides both superior braking and rotational balance, thereby reducing tool vibration during operation.
- The use of dual seals minimizes dust ingress and offers added protection for the spindle bearings to prevent tool seizure and jamming.
- Rotational head with dual tungsten carbide blast nozzles supplied standard with option for boron carbide upgrade.
